A LIGHT SYNTHESIZER

Llamasoft

ATARI

COLOURSPACE

We've caught the rainbow... and put it on tape for 48k Atari computers.

COLOURSPACE is not a game. COLOURSPACE is a light synthesiser, an instrument to let you play light instead of music. COLOURSPACE is best in a dark room with your favourite music. COLOURSPACE is curved, stroboscopic, dynamic, flowing, creative, zarjaz, and bounded only by the limits of your imagination.

COLOURSPACE is developed from the existing PSYCHEDELIA lightsynth. Here's what they said about PSYCHEDELIA...

'Looks like being one of the greatest entertainment programs ever...' C&VG

'Any description is inadequate for this... you have to see the effects to appreciate them...' HCW

'...so brilliant that I find words too cumbersome to describe it...' CG&SR

COLOURSPACE is better. Just how much better we still find it hard to believe. The ATARI hardware is probably the only 8-bit computer in existence which could generate the visual effects of COLOURSPACE.

COLOURSPACE. Ride the rainbow....

Compatible with all Atari M/C in 400/800, XL & XE range with at least 48k of memory.

The game and name Colourspace and all associated software, code, listings, audio effects, graphics, illustrations and text are the exclusive copyright of Llamasoft and may not be copied, transmitted, transferred, reproduced, hired, lent, distributed, stored or modified in any form without the express written permission of LLAMASOFT SOFTWARE, 49 MOUNT PLEASANT, TADLEY, ENGLAND.

Cover design: Steinar Lund.
