Xfolders - file manager for Mac OS X

Development and Copyright © 2003-2008 Kai Heitkamp. All rights reserved.

eMail: xfolders@kai-heitkamp.de
German website: http://www.kai-heitkamp.de
English website: http://www.kai-heitkamp.com

    Features

- Completely for Tiger re-written cocoa application.
- Uses the new technology of Mac OS X Tiger.
- Compatibly to Mac OS X 10.5 Leopard.
- Full integration of the Finder, thus support of all file operations from and
to the Finder.
- Drag & Drop between both filelists and the Finder.
- Support for all important file operations.
- Info dialogue for simply changing the file and folder attributes.
- Intelligent path navigators for both file lists.
- Bookmarks & manager for folders.
- Direct access to importend system utilities.
- Navigation with the keyboard ala Norton Commander.
- Integrated, detailed Spotlight search.
- Versatile search and compare possibilities.
- Zip archive support.
- Brushed metal or aqua style.
- Supports the following languages: English and german.
- Optimized for the PowerPC G5 processor, but remains compatible to G3
and G4 processors!
- Universal binary: Compatible with Intel based Macs!
- Xfolders is freeware!

Keyboard control ala Norton Commander:

<Tab>: Switch between the file lists.
Up and down <Arrow> keys: Navigate in file lists.
Left and right <Arrow> keys: Navigate in path navigators.
<Backspace>: Goto previous folder.
<Space>: Show the size of selected folder.
<Esc>: Deselect all.
<Return>: Enter the selected folder or run the app for the selected file.
<Pos1>: Select the first entry.
<End>: Select the last entry.
<Page up>: Scroll the file list one page up.
<Page down>: Scroll the file list one page down.

<F5>: Copy the selected items.
<F6>: Move the selected items.
<F7>: Create new folder.
<F8>: Move the selected items to trash.
<F9>: Rename the selected item.
<F10>: Terminates the app.

Path navigators context menu (click with right mouse button or ctrl-mouse on the path navigator):
Home folder: Change to your home folder
Path from right/left: Opens the path from left/right side
Volumes: Shows all mounted volumes
Other folder: Change to a folder that you input manually

Attention: "Expose" in Mac OS X 10.4 (Tiger) uses the F9, F10 and F11 keys by default! You need to change this (for example to F11, F12 and F13)
in the system preferences, or you deactivate the keyboard control for Expose!

      Important information for users

----

1.   System requirements: Apple PowerPC or Intel based Mac with Mac OS X 10.4 Tiger or Mac OS X 10.5 Leopard
2.   Xfolders is optimized for the G5 Processor, but runs on G3 and G4 too.
3.   Xfolders is running on Intel based Macs too (not tested yet)!
4.   All erasing processes in Xfolders are not absolute, i.e. all deleted files or folders move first into the trash!
       If you empty the trash, the data are really deleted!
5.   During certain changes in the preferences, you need to restart Xfolders to see the effect!
